Etrail

It was one of Nissan's first crossover SUV and was released about the same time as several other companies' competing car-based crossovers. At its introduction, the X-Trail is positioned below the truck-based Xterra and Pathfinder. The second-generation X-Trail shares its platform with the Rogue. The third-generation model is completely merged with the Rogue, making them virtually identical. The Rogue nameplate is mainly used in North America. For the first time, the vehicle is offered with three-row seating as an option. It also marked a departure in terms of design from a rugged boxy look to an urban-oriented crossover SUV design. Parts and engines that are produced in Japan are also assembled by other Nissan plants in numerous countries. It entered production in October, and sales in Japan commenced in November In June Nissan gave the car an interior and exterior facelift, while also upgrading the 2. The external differences were slight, although the grille and the bumpers were redesigned and the Nissan logo was updated to the latest design. The X-Trail was sold in Canada for the model years of and but Nissan Canada continued to market it until , and in Mexico since It has been sold in the Philippines since the middle of There was also a Fat Face special edition in , only for the United Kingdom, which was based on the Sports. They made 1, of them to celebrate the year Fat Face was set up. At this point, all models in the United Kingdom were equipped with full electric windows, electricity adjustable door mirrors on SVE and T-Spec they were electrically folding also , climate control, single CD player, four airbags and remote central locking. While in Australia all models were equipped with full electric windows, electric mirrors electric folding on Ti-L , single CD player, two airbags and remote central locking. ST-S adds ST on sunroof and 16" alloy wheels. In , Taiwanese Nissan distributor Yulon launched the Nissan X-Trail with a major design difference in the front end compared to the international version to fit the taste of the Taiwanese market. The model was sold until , when it received a minor facelift with new front bumper, grilles, headlamps, and LED tail lamps. Due to the late facelift, Yulon-Nissan skipped the second generation X-Trail and continued the production of the facelifted Taiwanese Nissan X-Trail until and was replaced by the American imported first generation Nissan Rogue. The X-Trail nameplate did not return until when the third generation Nissan X-Trail returned and continued to be domestically produced in Taiwan. To further expose the commercial's lack of linguistic authenticity, CBC News reported the sales rep was played by an actor from Cape Breton. John's, Newfoundland and Labrador , in a radio advert that takes shots at Ontario marketing companies and Premier Dalton McGuinty 's "nondescript" personality. The Nissan X-Trail had its public debut at the Geneva Motor Show in March , and went on sale in Japan in August , Europe in the third quarter of that year, and Australia and Mexico towards the end of the year. Slightly larger than the previous model, it is based on the Nissan C platform. The second generation was not sold in the United States and Canada, where it was instead replaced by the Rogue. This was the first diesel X-Trail offered in the Japanese domestic market. The previous 2. A facelift second generation was released in Japan in July The second generation was replaced in October , when the third generation X-Trail was unveiled in Japan. Only petrol engine variants were initially offered for Japan, with the diesel-engined second generation continuing to be available for the domestic market. The second generation was released in Malaysia in , where it was fully imported from Indonesia. The 2. Trim levels are Standard, Excellence and Premium. Although the new Nissan X-Trail has a larger surface area than the outgoing car, Nissan says weight has been reduced wherever possible. It features a tailgate dominated by plastic which saves 7 kg. Aerodynamics have also benefited from carefully shaped door mirrors as well as a spoiler that covers the exhaust box and rear panel. Japanese sales commenced on December 11, Early models include MR20DD engine, and an option of two or three rows of seats. Chinese models went on sale in the end of March It is only available with three rows of seats. It is manufactured in Purwakarta, Indonesia for domestic demand. It was also launched in Thailand in November and it is manufactured in Samut Prakan, Thailand for Thai domestic demand. In the Philippines, the third generation X-Trail was launched on 19 September during the 5th Philippine International Motor Show and is offered in two variants: 2. Engine choices remained the same as the pre-facelift model. It is only available in VL trim and powered by a 2. In April , Nissan announced that an X-Trail hybrid with claimed fuel economy of 4. For the Malaysian market, the third generation X-Trail was launched in January with two variants: 2. In March , bookings were opened for the facelifted X-Trail with a media preview happening in March as well. The facelifted X-Trail has been available in Malaysia since April All variants are only available with CVT. Australian models went on sale in March with both petrol and diesel variants: ST 2. European models went on sale in July , with the only engine available being a Renault sourced 1. The new X-Trail went on sale in October , and also has exterior and interior colours. A hybrid version of the vehicle premiered in January Limited Availability for the model year. Since their introduction in , Niner has set about to perfect the design of their bikes dedicated to the big-wheel design, which has helped them stay at the front of the popularity curve as far as 29ers go. From hardtail and full-suspension trail and gravel bikes and now e-bikes, the Colorado-based brand has always prided themselves on catering to every category of off-road rider. When the demand for e-bikes came along, the same mentality of access for all remained. The aluminum frame has internally routed cables and connects the motor mount with the upper and lower shock mount for maximum rigidity. The grey and black color scheme with multicolored lettering is pretty unique as well. One plus to this frame is a water-bottle mount, which seems to be hit or miss with many of the e-MTBs we have encountered. The larger Wh battery is integrated in the frame with a charge port near the bottom of the frame. Niner rates the parts spec as one of their three-star builds, which means most of the components are in the mid- to-upper-level category. When letting off the pedals to get over a technical rocky uphill, you can start pedaling again, and the power is there instantly. This allows for a more efficient use of the Wh battery. The RIP e9 will suit a wide range of riding styles, as well as terrain types. With about feet of elevation and some severely steep sections to traverse, we were excited to see we only used one bar of five to get to the top. Our first ride down some gnarly, rocky singletrack was when are eyes really got opened, though. So, having a slightly smaller frame seemed to have its advantages without feeling cramped on the bike. Only helping matters has been the timing of Bosch releasing their new motor and bigger battery. Adding to all that, Niner has made an e-bike that really fits a sweet spot in the market. The ergonomics feel really nice, and the added wheel size of the 29ers makes for a really smooth ride all around. The price is right in the ballpark of what you would expect for a bike with this ride quality and component build. They really put time into the design, making sure the weight was distributed evenly. When we first got the RIP e9 out of the box, our first thought was that the downtube looked extra square and big. Although, we quickly realized the new Wh battery takes up a bit more room, and Niner obviously did their homework making an extremely balanced machine. One trouble spot is the placement of the charge port, which is placed right on the inside of the cranks, which could cause damage if the cranks are rotated when charging. The frame comes with a lifetime warranty. Max Fredriksson Joins the Cannondale Family. Necessary cookies are absolutely essential for the website to function properly. Way back in , pioneering e-bike brand Haibike produced one of the first full-suspension, Bosch-equipped mountain bikes on the market. It was so popular that it was hard to find one at a dealer and virtually impossible to get one to test. The release of the All Mountain 7 is another defining moment. First, it has a Yamaha motor, which is still a bit of a rarity among the bigger bike brands. Second, it has a full-carbon frame and a price that will make other bike companies sweat. The carbon AllMtn off-road electric bike has mm of front and rear travel and is distinguished by its use of a inch front wheel and smaller The designers were

insistent that they did not compromise on anything. Their time was spent refining and working on the frame, including upgrading the carbon layups to meet higher specifications, as the rear frame parts were not exactly what they wanted back in October on the prototypes. The frame build is high quality, everything is integrated smartly, including the air cooling for the power system and a nice battery cover. The Fox 38 suspension is class-leading and absolutely appreciated. The Syntace wheelset is smart-looking and well-built. The weight is competitive and comparable to other carbon-framed bikes. The bike we tested was assembled in Europe. Over the years Haibike has pushed their geometry forward significantly. Increasing the seat tube angle to They also lengthened the reach to mm large , which means stability and space on fast descents. The bike feels very modern, and gone are the conservative geometry numbers of the past. This is a modern bike that will make the competition look old fashioned. The frame retains the design language of Haibike, including the angled frame and rear triangle layout, which also includes space and mounting points for their special light system. The head angle is open at 65 degrees. This bike means business on the trails. Sitting on the bike, it feels big and stable, and the geometry gives plenty of options for riding styles and various rider adjustments. The four-bar-link rear suspension is well-tuned and very active. It seems fairly normal, then you look at the price available from a normal shop. This almost seems impossible at this spec level. With up to percent of support from the top of five different power modes, the PW-X2 is a serious motor. Haibike says, based on their previous experience of Yamaha motors, this is the most reliable system on the market. It uses a Wh Yamaha-integrated battery, and during our testing the performance has been flawless. The display is an easy-to-read and -operate, bar-mounted display with basic information, including battery level, speed and support level. Ergonomics are still a weakness for off-the-shelf power controllers on all motor-brand systems. Only custom units on custom motors have met our high expectations for truly well-designed power switches. Using the power modes was a bit of an experiment at first, as we looked for the right setting according to how steep our climb was. In the end, we found the standard mid-power setting to cover most of our needs. If there were steep sections, we used the top power mode a few times, but overall we were impressed with the power options. Power consumption was in line with other motors we have used from the latest generation of systems. We felt that the motor, even on steep climbs, was efficient, and we did not experience any range anxiety with the Wh battery. We liked the step power counter. On a normal two-hour ride, we expect to return to base with about 10â€"20 percent left in the battery. This proved to be correct, even after a day of climbing. Honestly, we were very impressed with the Yamaha system. It is also apparently ultra reliable, with a very low-fault report level. For the ultra-tech geeks out there, there is neither any Bluetooth connectivity nor an app. This was a point that we were split on. For some, simplicity is the best solution for mountain bike adventures, but obviously there are those who totally disagree and prefer the convenience of being connected. The AllMtn 7 has a wide usage range. It can be used as a relaxed trail cruiser or an aggressive all-mountain machine. It has a clean, simple integrated look with a very reliable motor. If you want good-value carbon-frame technology, then this is an important bike to consider. The new geometry gives the rider one of the most comfortable riding positions we have tried to date. The Yamaha motor has a lot of power, with immediate support from zero cadence in high-power modes. The bike is agile in uphill corners, with low cadences still having continued power. The motor noise is a little quieter than a Bosch system. On flat trails, passing the speed limit is easy with little resistance. The motor adapts well to gradient changes, and the bike feels fun. We could float the bike around the trail very easily just playing whenever we wanted. The bike really stays planted and in contact with the trail, giving lots of grip at all times. When it came to rough, rocky descents, the bike felt stable, and the suspension supports the rider with lots of mid-travel support. The big Fox 38 fork is very smooth, and the extra stiffness is appreciated when impacting rock-laden holes. The Shimano XT brakes worked well, and always with enough power when you need it. The Maxxis tire choice was optimal, and had lots of grip and control in rocky sections. We could not fault the component offering. The Haibike AllMtn is a good example of the trickle-down of high-end features down to somewhat lower price levels. The bike rides really well and establishes a wider market appeal for Haibike, moving away from their traditional client base without alienating them. Max Fredriksson Joins the Cannondale Family. We rode an 18 mile section of this trail to Ferris Groves in Floral City, where we got to enjoy milkshakes, and made a stop by the overlook on the Withlacoochee river. The trail is in great shape, so the riding is enjoyable and the road crossings are preceded by generous curves to warn you of the changes. However the scenery on the trail is fairly monotonous, so it might be good to make sections of this trail part of a loop, unless you are riding with kids and their safety and attention span are a factor. But Ann Marsh remembered some of the serial numbers and this is the clue that Hoppy needs. He arrives posing as a dude. He also poses as a novice poker player and this brings in a few of the stolen bills. When he realizes Keller is the one he is after, he wins back all the money at the poker table. He escapes from Keller's saloon but Keller and his men head out after him. Mulford, creator of the Cassidy saga. The Eastern author frequently voiced his disgust over the realization of his cowboy hero in the movies. Things were a might more personal in 's Hollywood than they are today, and someone took a notion to teach Mulford a thing or two about the movies. The result is the wonderful Hopalong parody, Sunset Trail. Mulford is merrily satirized in the character of E. Prescott Furbush, an author of western novels. Furbush, who never having been west of Flatbush, nevertheless has gained fame recording the deeds of the western desperado, Deadeye Dan. But his antics pale beside those of another dude, William H. Cassidy, or Harold, as he's known among the other guests at the ranch. Hoppy has been sent to deal with land grabbers and assumes the identity of the inept Easterner, Harold, as cover. Forget the plot; it's predictable. What is not routine is Bill Boyd's performance. There is a swagger in his walk and a gleam in his eye reminiscent of the sharp-dressed, high-living Boyd of the 's. He deftly handles the comedy and energetically pokes fun at the Cassidy image. One of the most outstanding moments comes when Harold offers to compare surgical scars with a female guest who has been regaling Furbush with tales of her poor health. This episode may not appeal to everyone's sense of humor, but for me it is a final glimpse of Bill Boyd, being as wickedly funny as he is handsome before he permanently transformed himself into the stalwart cowboy hero.
